fibo intercon

Batching plants

Where flexibility and high production has priority

Mobile batching plants

Mobile batching plants are the foundation of fibo intercon's development of mixing systems.

Our main priorities being, productivity and flexibility, we have developed our program to include mobile and stationary batching plants, at a very competitive price.

The mobile plant is equipped with a standard control system. The simple, but powerful Icon system with a 25 recipe memory plus printer to document batch quality. An advanced customized system is available based on a industrial PC with continuous monitoring and a database for documentation. A logical system, which offers a wide range of user options, whilst being user friendly and easy to operate.

A wide range of accessories are available for the mobile plants. Additive dosing, integral cement auger, integrated cement silo, compressors, generators and concrete discharge conveyors.

Semi mobile plants

Semi mobile plants are characterized by a compact design which may be transported by container frame mounted trucks or trailers.

The plant is usually ready for production in 1-3 hours, depending on size. Connect power and water, fill the aggregate hoppers, connect cement supply and the plant is ready for production.

The semi mobile plant is typically characterized by a larger hopper capacity than the fully mobile system.

With the larger plants, a separate container mounted controlroom is offered.

Stationary plants

Stationary plants are offered for a range of outputs from 10 to 60 m³/hour.

The plant layout may be based on fibo intercon's own mixers, which are available in four different sizes. Alternative, for special applications, the plant may be equipped with a mixer from one of our European partners.

Batch plants are offered either as basic ground bins filled by wheel loader or as complete high bin systems, with distribution equipment filled by bucket elevator.

Aggregate batching by belt or gate.

For transporting concrete, we offer a wide range of conveyor belt and travelling buckets systems. Buckets systems are offered with rotating or bottom discharge.

Our product range also include gantry systems for casting machines.

Well trained technicians carry our projects through, from initial concept to production, based on their wide experience and know-how.

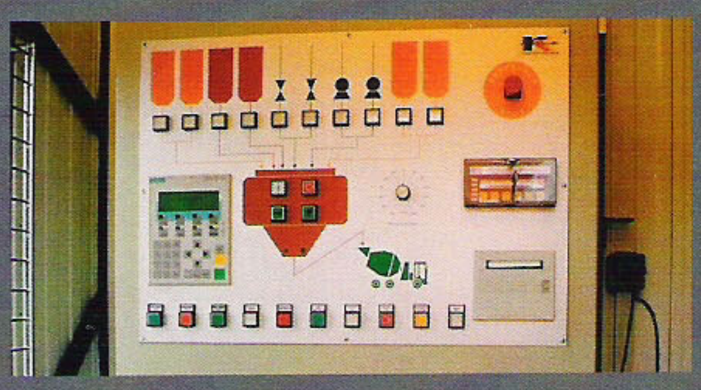

Control systems

Fibo Intercon has developed a range of control systems to suit individual customer needs, in cooperation with a leading European manufactures of process control systems.

A clear operators panel, easy recipe set up, continuous monitoring plus the option of production reports and data via GSM net or SMS.

Special equipments

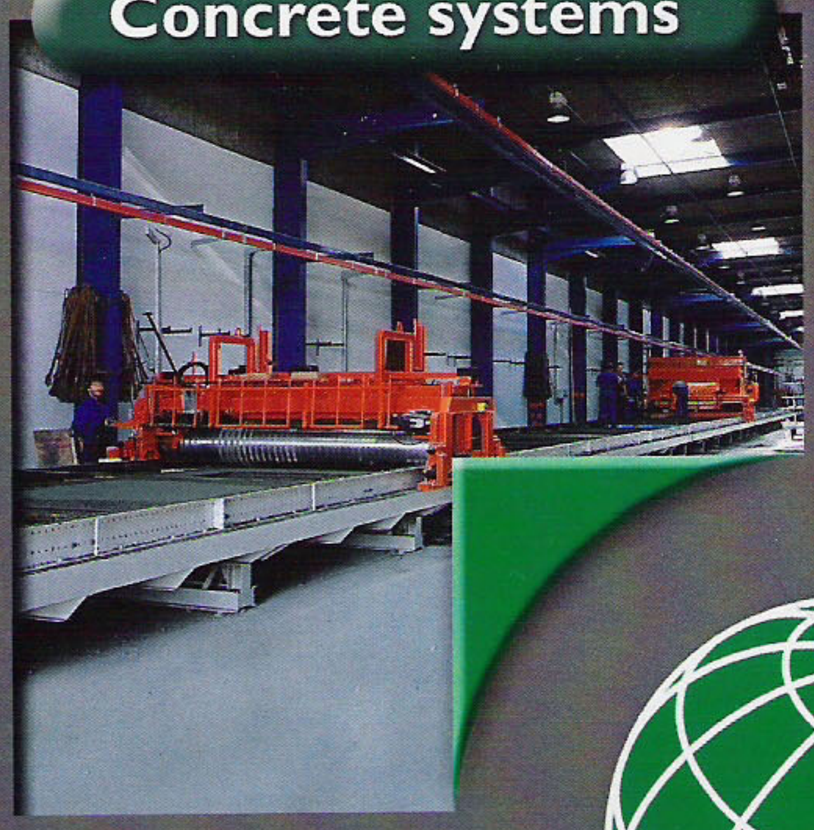

Low profile cement hopper, with auger conveyor. Mounted on container frame.

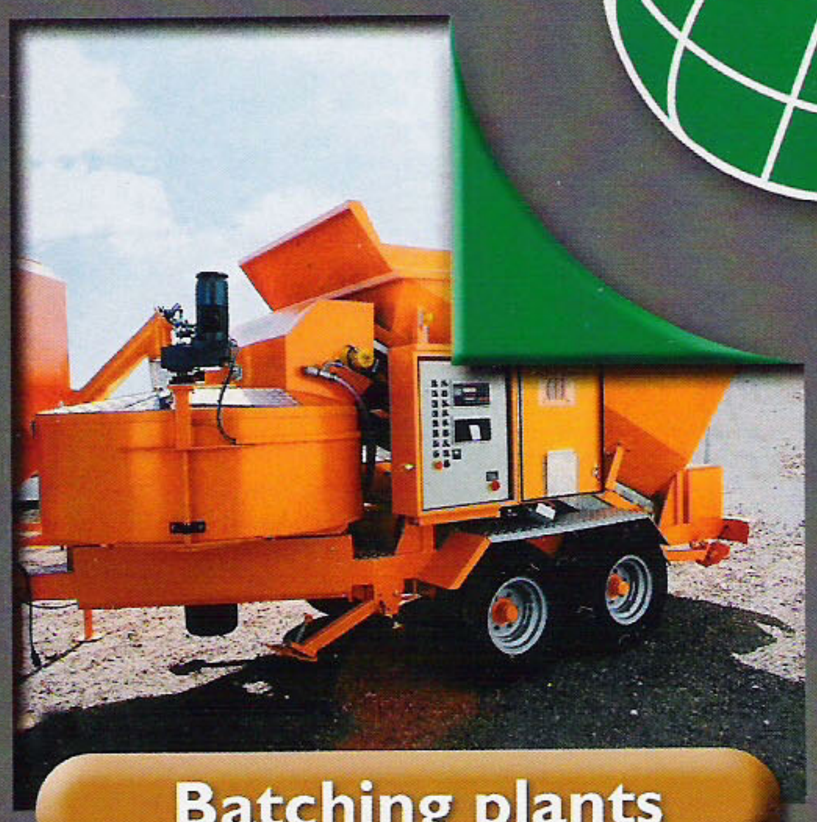

Recycling plant for trench materials. Crushes, screens and mixes.

Concrete systems

Bulk handling

Batching plants

Engineering

fibo intercon is a leading and highly reputable supplier of mobile batching plants and concrete production systems for the concrete and construction industry.

Our standard batching plants are supplied as mobile, semi-mobile and stationary plants. Furthermore we supply mixers and plants designed for special purposes.

We offer complete plants and machinery for the production of various concrete products and in the field of lightweight concrete we have a great deal of experience and knowledge in building plants for the production of wall panel units, flooring elements and blocks.

In addition we can supply special designed plants and machinery.

Combined with above product areas we have currently developed machines and equipment for the handling of aggregates and finished products and today our range of equipment also includes,

- Feeding systems by volume or weight
- Silo plants
- Bulk handling of all types of aggregates
- Systems for handling finished products
- Equipment for the cement industry

We have our own electrical department for software development and the building of switchboards used in our machines and systems.

fibo intercon is active in the fields of engineering, project planning and management.

fibo intercon is an independent company with a long history and a broad experience as supplier to the concrete and construction industry.

Our products are exported worldwide.
