Semi-mobile Batching Plant for extreme winter conditions

Bins with inlet for heating system.

Weighing cells installed under the mixer.

Pumps for additives.

fibo intercon can now offer a new developed and up to date semi-mobile batching plant designed for full winter condition. This gives the contractor the opportunity to work in wintertime.
This plant shown has to work under extreme conditions in Siberia, Russia.
The complete plant consist of the semi-mobile batching plant fully isolated, concrete delivery conveyor, 150 KVA generator, 30 tonne cement silo and extern steam heating system installed in a separate 20' container.

Fully automatic PLC control with option for 25 mix recipes and equipped with printer for documentation.

Batch plant ready for transport to Russia

The semi-mobile batching plant includes 2 bins for aggregates each 8 m^3, which are covered with an isolated hatch, one 1 m^3 pan mixer, additive pumps, heated water system and a Siemens control system installed in a special designed control room, where all technical equipment is placed.
The aggregate bins prepared for connection to an extern heating system. The inside room and water system are heated as well. This means a batching plant designed to work under real winter conditions.
